**AGENDA ITEM 3
ACTION ITEM**

SCHOLARSHARE INVESTMENT BOARD

Review and Analysis of Investment Performance for the ScholarShare College Savings Plan for First Quarter 2016 and Resolution to Approve Placement of the TIAA-CREF Bond Index Fund on Watch Status

Recommendation

ScholarShare Investment Board (SIB or Board) staff recommends the Board adopt Resolution No. 2016-02 approving the placement of the TIAA-CREF Bond Index Fund on “watch” status.

Background

The Board and its investment consultant, Pension Consulting Alliance, LLC (PCA), monitor all portfolios in the ScholarShare College Savings Plan (Plan) in accordance with the ScholarShare Monitoring Procedures and Criteria adopted by the Board.

In this item, SIB will review and discuss “Investment Performance Report” (Exhibit A) for the Plan for first quarter 2016, provided by TIAA-CREF Tuition Financing, Inc., and PCA’s “Investment Performance Status Report” (Exhibit B) for first quarter 2016. PCA’s report compares each underlying fund allocated to the portfolios used in the Plan, to applicable benchmark criteria and labels the current status of funds as “positive,” “acceptable,” “caution,” or “watch.”

For the first quarter of 2016:

- 12 underlying funds were in the “positive” status (one of which was on “watch” status),
- Five underlying funds were in the “acceptable” status, and
- Two underlying funds were in “caution” status (one of which was on “watch” status).

As outlined in its memo (Exhibit C), PCA is recommending that the two underlying funds currently on “watch” status, the PIMCO Income Fund and the PIMCO Real Return Fund, remain on “watch” status, and that the TIAA-CREF Bond Index Fund be placed on “watch” status.

Presenters

Jeremy Thiessen, Senior Director, TIAA-CREF Tuition Financing, Inc.
Eric White, Principal, Pension Consulting Alliance, LLC.

RESOLUTION NO. 2016-02

**RESOLUTION OF THE SCHOLARSHARE INVESTMENT BOARD
APPROVING THE PLACEMENT OF THE
TIAA-CREF BOND INDEX FUND ON WATCH STATUS**

WHEREAS, the ScholarShare Investment Board (the “Board”) was created under the Education Code section 69980 et seq. (the “Golden State ScholarShare Trust Act” or “Act”); and

WHEREAS, the Board has a fiduciary responsibility on behalf of the ScholarShare participants and beneficiaries to monitor the investment manager’s mutual funds and investment performance; and

WHEREAS, the Board adopted the Golden State ScholarShare College Savings Trust Monitoring Procedures and Criteria (the “Procedures”) to provide guidelines for monitoring the investment manager’s mutual funds and investment performance as part of its fiduciary responsibility on behalf of the ScholarShare participants and beneficiaries; and

WHEREAS, the SIB staff and Board’s investment consultant (the “Consultant”) have reviewed and analyzed the investment performance of the portfolios and funds in the ScholarShare College Savings Plan through the end of first quarter 2016; and

WHEREAS, the performance of the TIAA-CREF Bond Index Fund (the “Fund”) has not met the investment performance criteria (the “Benchmarks”) outlined in the Procedures; and

WHEREAS, per the Procedures, the Board may place underlying funds that do not meet the Benchmarks on watch status.

NOW, THEREFORE, BE IT RESOLVED, that the Board approve the placement of the Fund on watch status.

BE IT FURTHER RESOLVED, that this Resolution becomes effective upon its adoption by the Board.

Attest:

Chairperson

Date of Adoption:

ScholarShare College Savings Plan

Investment Performance Report

1st Quarter, 2016

SCHOLARSHARE

.....
CALIFORNIA'S 529 COLLEGE SAVINGS PLAN
.....

Key themes

- After expanding a modest 1.4% in the fourth quarter of 2015, the U.S. economy started slowly in the first quarter of 2016, with some forecasters suggesting that recessionary threats had surfaced.
- Data releases gradually improved later in the period, signaling that growth should pick up slightly in the second quarter.

Equities

- Many U.S. equity markets experienced a “V-like” trend, slumping into correction territory before rebounding mid-way through the quarter and finishing Q1 with modest gains.
- Emerging markets outperformed both international developed and U.S. markets.

Fixed Income

- As treasury yields fell across all maturities in Q1, many fixed income segments had solid results.
- Positive flows supported investment-grade and high yield corporate bonds.

Actively Managed Portfolios vs. Composite Benchmarks

Q1 2016 Returns (%)

Since Inception Returns as of 03/31/16 (%)

* Returns are net of most recent weighted average Underlying Fund Fees, Program Management Fees (5 bps) and State Administrative Fees (5 bps).

- The U.S. labor market generated 215,000 jobs in March and 628,000 for the first quarter as a whole. With more people joining the workforce, the unemployment rate inched up in March, from 4.9% to 5.0%, and the labor force participation rate reached 63% for the first time in two years.
- New home sales increased in February from January's upwardly revised total. Existing home sales, in contrast, tumbled in February following a strong showing in January.
- Most Actively Managed Portfolios had positive absolute returns in Q1 and trailed their blended benchmarks after fees.
- The most notable contributor to absolute and relative returns in Q1 was the DFA Emerging Markets Core Equity I Portfolio, which returned 7.26%, 155 basis points over its benchmark. Due to the strong performance in Q1, this fund now has positive relative returns for all standard trailing periods.
- Lagging was the T. Rowe Price Large Cap Growth Fund, whose stock selection strategy was out of favor in Q1. This fund returned -6.44%, over 700 basis points less than the Russell 1000 Growth benchmark.
- Since inception, nearly all actively managed portfolios continue to beat their blended benchmarks.
- The TC Life Funding Agreement outperformed by 22 basis points in Q1.

- The S&P 500® Index suffered a January slump (-4.96%) that spilled into February (-0.13%), with the Index touching a two-year low on February 11. The S&P 500 then sharply reversed course, following oil prices higher, en route to a 6.78% return in March and 1.35% for the quarter as a whole, nearly matching its gain for all of 2015.
- The Barclays U.S. Aggregate Bond Index, a broad measure of the domestic investment-grade bond market, benefited from declining interest rates to post its best quarter (+3.03%) in more than four years.
- Nearly all Passively Managed Portfolios posted positive absolute returns for the quarter and either performed in line with or slightly underperformed their benchmarks after fees, as expected.
- The TIAA-CREF Emerging Markets Equity Index Fund, which tracks the MSCI Emerging Markets Index, provided a boost to absolute and relative returns for many portfolios and posted a gain of 6.00% for the quarter.
- The Passive Diversified Fixed Income Portfolio, which combines funds with exposure to intermediate term bonds, high yield bonds, and TIPS, had the highest returns in Q1, at 3.16%.

Actively Managed Portfolios vs. Passively Managed Portfolios

Q1 2016 Returns (%)

Since Inception Returns as of 03/31/16 (%)

* Returns are net of most recent weighted average Underlying Fund Fees, Program Management Fees (5 bps), and State Administrative Fees (5 bps).

** Returns are net of most recent weighted average Underlying Fund Fees, Program Management Fees (5 bps), and State Administrative Fees (5 bps) before 11/12/13.

- In Q1, nearly all Passively Managed Portfolios outperformed the Actively Managed Portfolios. A few underlying funds in the Active Portfolios underperformed their benchmark, which resulted in lower returns for these portfolios compared to their passive counterparts.
- For example, the domestic equity funds in the Actively Managed Portfolios -- the T. Rowe Price Large Cap Value Fund, the T. Rowe Price Large Cap Growth Fund, and the TIAA-CREF Small Cap Equity Fund -- all underperformed, while the TIAA-CREF Equity Index Fund in the Passively Managed Portfolios delivered benchmark-like returns.
- Since Inception returns continue to favor the Actively Managed Portfolios, though they lead the Passively Managed Portfolios by smaller amounts than they had in the past.

TAKEAWAYS

- For the first quarter of 2016, actively managed, early age-based portfolios posted negative absolute returns, while mid- to later age-based portfolio returns were positive; all actively managed age-based portfolios underperformed their respective benchmarks during the period. All passively managed age-based portfolios generated positive absolute results that tracked or slightly trailed their respective benchmarks for the period.
- Markets were volatile to start the year and resulted in the Plan's US Equity funds generating positive absolute returns for the quarter, with the exception of growth-oriented funds. Absolute returns were negative for the Plan's International Equity managers during the quarter.
- Emerging markets ended the quarter strongly as increasing oil prices and a weakening US dollar led to a strong market rally that erased the losses sustained earlier in the period. Age-bands with larger emerging markets exposure benefited from the fund's robust performance.
- Global bond markets earned positive returns over the quarter as ongoing demand for safe-haven assets combined with the Fed's decision not to raise rates in March pushed yields lower and raised fixed income prices. All of the Plan's Fixed Income managers posted positive absolute returns for the quarter, largely benefitting later age-based portfolios.
- Global economic growth is expected to remain modest through 2016, while commodity price movements will continue to weigh heavily on market sentiment.

SECTION 1

ECONOMIC OVERVIEW

Overview: US GDP growth for the first quarter of 2016 (advanced estimate) has slowed since the fourth quarter of 2015 decreasing from 1.4% to 0.5%. GDP growth during the first quarter was driven mostly by consumer spending on household services. The unemployment rate dropped to 4.9% as of quarter end, continuing its downward trend over the last 2+ years. The Consumer Price Index for All Urban Consumers increased by 0.5% in the quarter. Commodities improved in the first quarter, as they returned 0.3%, up from last quarter’s return of (10.5%). The US dollar appreciated against the British Pound, and depreciated against the Yen and Euro this quarter. US equities provided mixed results, with broad and large cap stocks delivering slightly positive returns for the quarter, and small cap growth and core stocks earning negative returns over the same period. International Equities performed poorly for the quarter and 1-year periods. The BC Universal Index returned 3.1% during the quarter, which increased the 1-year return to 1.8%.

Economic Growth

- Real GDP increased at an annualized rate of 0.5 percent in the first quarter of 2016, which is the lowest rate of growth since the first quarter of 2014.
- Consumer spending on household services, nondurable goods, and residential investment as well as state and local government spending had the largest impact on GDP.
- First quarter gains in GDP growth was slightly offset by decreases in business investment, private inventory investment, goods exports, and federal government spending.

Annualized Quarterly GDP Growth

Inflation

- The Consumer Price Index for All Urban Consumers (CPI-U) increased by 0.5 percent in the quarter on an annualized basis after seasonal adjustment.
- Quarterly percentage changes may be adjusted between data publications due to periodic updates in seasonal factors.
- Core CPI-U increased by 3.2 percent for the quarter on an annualized basis.
- Over the last 12 months, core CPI-U increased 2.3 percent after seasonal adjustment.

CPI-U After Seasonal Adjustment

Unemployment

- The US economy gained approximately 628,000 jobs in the quarter.
- The unemployment rate fell slightly to 4.9% at quarter end.
- The majority of jobs gained occurred in the retail trade, construction, and leisure and hospitality. The majority of jobs lost occurred in temporary help services, mining and logging, and durable goods.

Unemployment Rate

Interest Rates & US Dollar

- US Treasury yields rose on average over the quarter.
- The Federal Reserve has maintained the federal funds rate between 0.25 percent and 0.50 percent.
- The US dollar appreciated against the British Pound by 2.6%, and depreciated against the Yen and Euro by 6.4% and 4.8%, respectively.

Treasury Yield Curve Changes

Source: US Treasury Department

Fixed Income

- US bond markets delivered positive returns for the quarter with credit, returning 3.9%, performing the best, while ABS performed the worst at 1.4%.
- Despite a strong first quarter, high yield continued to trail all other bond sectors over the trailing 1-year period. Governments and MBS provided the strongest returns each with 2.4%.

US Equities

- During the quarter, broad and large cap stocks performed similarly, while small cap core and growth stocks performed poorly with returns of (1.5%) and (4.7%), respectively.
- During the 1-year period, growth outperformed value stocks in the broad and large capitalizations, but underperformed in the small cap space. Large cap growth stocks performed the best over the 1-year period returning 2.5%, while small cap growth lagged behind, with a double digit negative return of (11.8%).

Telecomm. Serv.	2.5%	15.5%	18.6%

International Equities

- International equities performed poorly over the quarter with the exception of emerging markets which posted the only positive return at 5.8%.
- Over the 1-year period, international equities provided negative returns across the board. The Pacific had the least negative results, while emerging markets performed the worst with (7.7%), and (11.7%), respectively.

SECTION 2

INVESTMENT MARKET RISK METRICS

Takeaways

- Equity markets worldwide rallied in March after Janet Yellen indicated the Fed would not raise rates and reduced expected 2016 hikes by half.
- Bond spreads tightened on the Fed news.
- Prices of U.S. public equity, private equity, and real estate equity remain expensive relative to U.S. credit and non-U.S. equities.
- Commodity prices ticked up slightly for the first time in two years.
- The PCA Market Sentiment Indicator returned to **neutral** in March versus the negative January and February indications, based on the March equity market rally.
- Breakeven inflation recovered from lows, moving above 1.5%, but remains very low.
- The 10-year Treasury yield declined after the Fed announcement, ending the month below 1.8%.

¹See Appendix for the rationale for selection and calculation methodology used for the risk metrics.

METRIC DESCRIPTION, RATIONALE FOR SELECTION AND CALCULATION METHODOLOGY

US Equity Markets:

Metric: P/E ratio = Price / "Normalized" earnings for the S&P 500 Index

To represent the price of US equity markets, we have chosen the S&P 500 index. This index has the longest published history of price, is well known, and also has reliable, long-term, published quarterly earnings. The price=P of the P/E ratio is the current price of the market index (the average daily price of the most recent full month for the S&P 500 index). Equity markets are very volatile. Prices fluctuate significantly during normal times and extremely during periods of market stress or euphoria. Therefore, developing a measure of earnings power (E) which is stable is vitally important, if the measure is to provide insight. While equity prices can and do double, or get cut in half, real earnings power does not change nearly as much. Therefore, we have selected a well known measure of real, stable earnings power developed by Yale Professor Robert Shiller known as the Shiller E-10. The calculation of E-10 is simply the average real annual earnings over the past 10 years. Over 10 years, the earnings shenanigans and boom and bust levels of earnings tend to even out (and often times get restated). Therefore, this earnings statistic gives a reasonably stable, slow-to-change estimate of average real earnings power for the index. Professor Shiller's data and calculation of the E-10 are available on his website at <http://www.econ.yale.edu/~shiller/data.htm>. We have used his data as the base for our calculations. Details of the theoretical justification behind the measure can be found in his book *Irrational Exuberance* [Princeton University Press 2000, Broadway Books 2001, 2nd ed., 2005].

Developed Equity Markets Excluding the US:

Metric: P/E ratio = Price / "Normalized" earnings for the MSCI EAFE Index

To represent the price of non-US developed equity markets, we have chosen the MSCI EAFE index. This index has the longest published history of price for non-US developed equities. The price=P of the P/E ratio is the current price of the market index (the average daily price of the most recent full month for the MSCI EAFE index). The price level of this index is available starting in December 1969. Again, for the reasons described above, we elected to use the Shiller E-10 as our measure of earnings (E). Since 12/1972, a monthly price earnings ratio is available from MSCI. Using this quoted ratio, we have backed out the implied trailing-twelve month earnings of the EAFE index for each month from 12/1972 to the present. These annualized earnings are then inflation adjusted using CPI-U to represent real earnings in US dollar terms for each time period. The Shiller E-10 for the EAFE index (10 year average real earnings) is calculated in the same manner as detailed above.

However, we do not believe that the pricing and earnings history of the EAFE markets are long enough to be a reliable representation of pricing history for developed market equities outside of the US. Therefore, in constructing the Long-Term Average Historical P/E for developed ex-US equities for comparison purposes, we have elected to use the US equity market as a developed market proxy, from 1881 to 1982. This lowers the Long-Term Average Historical P/E considerably. We believe this methodology provides a more realistic historical comparison for a market with a relatively short history.

Appendix

METRIC DESCRIPTION, RATIONALE FOR SELECTION AND CALCULATION METHODOLOGY

Emerging Market Equity Markets:

Metric: Ratio of Emerging Market P/E Ratio to Developed Market P/E Ratio

To represent the Emerging Markets P/E Ratio, we have chosen the MSCI Emerging Market Free Index, which has P/E data back to January 1995 on Bloomberg. To represent the Developed Markets PE Ratio, we have chosen the MSCI World Index, which also has data back to January 1995 on Bloomberg. Although there are issues with published, single time period P/E ratios, in which the denominator effect can cause large movements, we feel that the information contained in such movements will alert investors to market activity that they will want to interpret.

US Private Equity Markets:

Metrics: S&P LCD Average EBITDA Multiples Paid in LBOs and US Quarterly Deal Volume

The Average Purchase Price to EBITDA multiples paid in LBOs is published quarterly by S&P in their LCD study. This is the total price paid (both equity and debt) over the trailing-twelve month EBITDA (earnings before interest, taxes, depreciation and amortization) as calculated by S&P LCD. This is the relevant, high-level pricing metric that private equity managers use in assessing deals. Data is published monthly.

US quarterly deal volume for private equity is the total deal volume in \$ billions (both equity and debt) reported in the quarter by Thomson Reuters Buyouts. This metric gives a measure of the level of activity in the market. Data is published quarterly.

U.S Private Real Estate Markets:

Metrics: US Cap Rates, Cap Rate Spreads, and Transactions as a % of Market Value

Real estate cap rates are a measure of the price paid in the market to acquire properties versus their annualized income generation before financing costs (NOI=net operating income). The data, published by NCREIF, describes completed and leased properties (core) on an unleveraged basis. We chose to use current value cap rates. These are capitalization rates from properties that were revalued during the quarter. This data relies on estimates of value and therefore tends to be lagging (estimated prices are slower to rise and slower to fall than transaction prices). The data is published quarterly.

Spreads between the cap rate (described above) and the 10-year nominal Treasury yield, indicate a measure of the cost of properties versus a current measure of the cost of financing.

Transactions as a % of Market Value Trailing-Four Quarters is a measure of property turnover activity in the NCREIF Universe. This quarterly metric is a measure of activity in the market.

Credit Markets US Fixed Income:

Metric: Spreads

The absolute level of spreads over treasuries and spread trends (widening / narrowing) are good indicators of credit risk in the fixed income markets. Spreads incorporate estimates of future default, but can also be driven by technical dislocations in the fixed income markets. Abnormally narrow spreads (relative to historical levels) indicate higher levels of valuation risk, wide spreads indicate lower levels of valuation risk and / or elevated default fears. Investment grade bond spreads are represented by the Barclays Capital US Corporate Investment Grade Index Intermediate Component. The high yield corporate bond spreads are represented by the Barclays Capital US Corporate High Yield Index.

Appendix

METRIC DESCRIPTION, RATIONALE FOR SELECTION AND CALCULATION METHODOLOGY

Measure of Equity Market Fear / Uncertainty

Metric: VIX – Measure of implied option volatility for U.S. equity markets

The VIX is a key measure of near-term volatility conveyed by implied volatility of S&P 500 index option prices. VIX increases with uncertainty and fear. Stocks and the VIX are negatively correlated. Volatility tends to spike when equity markets fall.

Measure of Monetary Policy

Metric: Yield Curve Slope

We calculate the yield curve slope as the 10 year treasury yield minus the 1 year treasury yield. When the yield curve slope is zero or negative, this is a signal to pay attention. A negative yield curve slope signals lower rates in the future, caused by a contraction in economic activity. Recessions are typically preceded by an inverted (negatively sloped) yield curve. A very steep yield curve (2 or greater) indicates a large difference between shorter-term interest rates (the 1 year rate) and longer-term rates (the 10 year rate). This can signal expansion in economic activity in the future, or merely higher future interest rates.

Measures of US Inflation Expectations

Metrics: Breakeven Inflation and Inflation Adjusted Commodity Prices

Inflation is a very important indicator impacting all assets and financial instruments. Breakeven inflation is calculated as the 10 year nominal treasury yield minus the 10 year real yield on US TIPS (treasury inflation protected securities). Abnormally low long-term inflation expectations are indicative of deflationary fears. A rapid rise in breakeven inflation indicates an acceleration in inflationary expectations as market participants sell nominal treasuries and buy TIPS. If breakeven inflation continues to rise quarter over quarter, this is a signal of inflationary worries rising, which may cause Fed action and / or dollar decline.

Commodity price movement (above the rate of inflation) is an indication of anticipated inflation caused by real global economic activity putting pressure on resource prices. We calculate this metric by adjusted in the Dow Jones UBS Commodity Index (formerly Dow Jones AIG Commodity Index) by US CPI-U. While rising commodity prices will not necessarily translate to higher US inflation, higher US inflation will likely show up in higher commodity prices, particularly if world economic activity is robust.

These two measures of anticipated inflation can, and often are, conflicting.

Measures of US Treasury Bond Interest Rate Risk

Metrics: 10-Year Treasury Forward-Looking Real Yield and 10-Year Treasury Duration

The expected annualized real yield of the 10 year U.S. Treasury Bond is a measure of valuation risk for U.S. Treasuries. A low real yield means investors will accept a low rate of expected return for the certainty of receiving their nominal cash flows. PCA estimates the expected annualized real yield by subtracting an estimate of expected 10 year inflation (produced by the Survey of Professional Forecasters as collected by the Federal Reserve Bank of Philadelphia), from the 10 year Treasury constant maturity interest rate.

Duration for the 10-Year Treasury Bond is calculated based on the current yield and a price of 100. This is a measure of expected percentage movements in the price of the bond based on small movements in percentage yield. We make no attempt to account for convexity.

Definition of “extreme” metric readings

A metric reading is defined as “extreme” if the metric reading is in the top or bottom decile of its historical readings. These “extreme” reading should cause the reader to pay attention. These metrics have reverted toward their mean values in the past.

PCA Market Sentiment Indicator

Explanation, Construction and Q&A

By:

Pension Consulting Alliance, LLC.

John Linder, CFA, CPA

Neil Rue, CFA

PCA has created the PCA Market Sentiment Indicator (PMSI) to complement our valuation focused PCA Investment Market Risk Metrics. This measure of sentiment is meant to capture significant and persistent shifts in long lived market trends of economic growth risk, either towards a risk seeking trend or a risk aversion trend.

This paper explores:

- What is the PCA Market Sentiment Indicator (PMSI)?
- How do I read the indicator graph?
- How is the PCA Market Sentiment Indicator (PMSI) constructed?
- What do changes in the indicator mean?

PCA Market Sentiment Indicator

PCA has created a market sentiment indicator for monthly publication (the PMSI – see below) to complement PCA's Investment Market Risk Metrics.

PCA's Investment Market Risk Metrics, which rely significantly on standard market measures of relative valuation, often provide valid early signals of increasing long-term risk levels in the global investment markets. However, as is the case with numerous valuation measures, the Risk Metrics may convey such risk concerns long before a market corrections take place. The PMSI helps to address this early-warning bias by measuring whether the markets are beginning to acknowledge key Risk Metrics trends, and / or indicating non-valuation based concerns. Once the PMSI indicates that the market sentiment has shifted, it is our belief that investors should consider significant action, particularly if confirmed by the Risk Metrics. Importantly, PCA believes the Risk Metrics and PMSI should always be used in conjunction with one another and never in isolation. The questions and answers below highlight and discuss the basic underpinnings of the PCA PMSI:

What is the PCA Market Sentiment Indicator (PMSI)?

The PMSI is a measure meant to gauge the market's sentiment regarding economic growth risk. Growth risk cuts across most financial assets, and is the largest risk exposure that most portfolios bear. The PMSI takes into account the momentum (trend over time, positive or negative) of the economic growth risk exposure of publicly traded stocks and bonds, as a signal of the future direction of growth risk returns; either positive (risk seeking market sentiment), or negative (risk averse market sentiment).

How do I read the PCA Market Sentiment Indicator (PMSI) graph?

Simply put, the PMSI is a color coded indicator that signals the market's sentiment regarding economic growth risk. It is read left to right chronologically. A green indicator on the PMSI indicates that the market's sentiment towards growth risk is positive. A gray indicator indicates that the market's sentiment towards growth risk is neutral or inconclusive. A red indicator indicates that the market's sentiment towards growth risk is negative. The black line on the graph is the level of the PMSI. The degree of the signal above or below the neutral reading is an indication the signal's current strength.

Momentum as we are defining it is the use of the past behavior of a series as a predictor of its future behavior.

PCA Market Sentiment Indicator

How is the PCA Market Sentiment Indicator (PMSI) Constructed?

The PMSI is constructed from two sub-elements representing investor sentiment in stocks and bonds:

1. Stock return momentum: Return momentum for the S&P 500 Equity Index (trailing 12-months)
2. Bond yield spread momentum: Momentum of bond yield spreads (excess of the measured bond yield over the identical duration U.S. Treasury bond yield) for corporate bonds (trailing 12-months) for both investment grade bonds (75% weight) and high yield bonds (25% weight). The scale of this measure is adjusted to match that of the stock return momentum measure.

The black line reading on the graph is calculated as the average of the stock return momentum measure and the bonds spread momentum measure. The color reading on the graph is determined as follows:

1. If both stock return momentum and bond spread momentum are positive = GREEN (positive)
2. If one of the momentum indicators is positive, and the other negative = GRAY (inconclusive)
3. If both stock return momentum and bond spread momentum are negative = RED (negative)

What does the PCA Market Sentiment Indicator (PMSI) mean? Why might it be useful?

There is strong evidence that time series momentum is significant and persistent. In particular, across an extensive array of asset classes, the sign of the trailing 12-month return (positive or negative) is indicative of future returns (positive or negative) over the next 12 month period. The PMSI is constructed to measure this momentum in stocks and corporate bond spreads. A reading of green or red is agreement of both the equity and bond measures, indicating that it is likely that this trend (positive or negative) will continue over the next 12 months. When the measures disagree, the indicator turns gray. A gray reading does not necessarily mean a new trend is occurring, as the indicator may move back to green, or into the red from there. The level of the reading (black line) and the number of months at the red or green reading, gives the user additional information on which to form an opinion, and potentially take action.

ⁱ Momentum as we are defining it is the use of the past behavior of a series as a predictor of its future behavior.

GLOSSARY

Annualized Return – The average annual return of either the manager or its benchmark.

Excess Performance – Manager returns in excess of the benchmark returns.

Standard Deviation – A measure of dispersion of a set of data from its mean.

Excess Standard Deviation – A measure of the volatility of the average annual difference between the manager's return and the benchmark's return, same as tracking error.

VRR – Value Relative Ratio – Is calculated as: $\text{Manager Cumulative Return} / \text{Benchmark Cumulative Return}$.

DISCLOSURES: This document is provided for informational purposes only. It does not constitute an offer of securities of any of the issuers that may be described herein. RE: Review of Underlying Funds Qualifying for “Watch” Status

Summary

PCA has conducted a review of the underlying funds in the ScholarShare College Savings Plan. The review included a quantitative analysis of the underlying funds based on specific performance criteria (as per the *Monitoring Procedures and Criteria*) as well as a qualitative analysis, including a review of organizational concerns, stability of personnel, changes in investment objectives, etc. This memo summarizes the period from January 1, 2016 through March 31, 2016. At the end of the period, **two funds remain on “Watch” status for organizational concerns:** the PIMCO Income Fund and the PIMCO Real Return Fund. Additionally, **two funds qualify for “Watch” status for performance concerns:** the PIMCO Real Return Fund (currently on “Watch”) and the TIAA-CREF Bond Index Fund. PCA recommends the two funds currently on “Watch” status remain on “Watch” and the TIAA-CREF Bond Index fund also be placed on “Watch” status. Each of these funds is discussed in more detail on the following pages.

Performance of Funds on Watch Status As of 3/31/2016

Funds on Watch Status	Plan Assets (\$mil)	Board Action Date	Watch Status Start Date	Number of Months Since Watch Began	Excess Perf. Since Watch Began	Perf. / Org. Concerns
PIMCO Income Fund	\$134.6	10/02/2014	10/01/2014	18	-0.70%	Org.
PIMCO Real Return Fund	\$129.9	10/02/2014	10/01/2014	18	-1.59%	Org./Perf.*
TIAA-CREF Bond Index Fund	\$1095.4	pending	---	---	---	Perf.

*The PIMCO Real Return Fund was placed on “Watch” status for organizational concerns in October 2014. As of the period ending March 31, 2016, the fund also qualifies for “Watch” status for performance concerns upon breaching the short-term *Monitoring Procedures and Criteria*.

Background

At the October 2, 2014 Board meeting, the Board approved the recommendation to place the following three funds on “Watch” status to be closely monitored due to material organizational changes: i) PIMCO Total Return Fund, ii) PIMCO Income Fund, and iii) PIMCO Real Return Fund. The Board also authorized the Executive Director of SIB to take necessary action, with the recommendation of PCA and TIAA Tuition Financing, Inc. (TFI), to remove any or all of the three PIMCO funds for replacement by actively-managed bond fund(s) with comparable risk return characteristics. On October 10, 2014, in accordance with the ScholarShare *Monitoring*

Procedures and Criteria and upon recommendation of PCA and TFI, assets were transferred from the PIMCO Total Return Fund to the TIAA-CREF Bond Plus Fund. With that fund replacement completed, the remaining two funds on "Watch" status include the PIMCO Income Fund and the PIMCO Real Return Fund.

New Funds Qualifying for "Watch" Status

PCA has conducted a review of the underlying funds in the ScholarShare College Savings Plan (see also the 1Q2016 ScholarShare College Savings Plan Investment Performance Status Report) and determined that two funds qualify for "Watch" status at this time. The PIMCO Real Return fund, which is currently on "Watch" status for organizational concerns, also qualifies for "Watch" for performance reasons upon breaching the short-term investment monitoring guidelines for active fixed income; the fund has underperformed its benchmark by greater than (1.0%) for six consecutive rolling 12-month periods (the rolling 12-month periods from October 2015 – March 2016). The TIAA-CREF Bond Index fund also qualifies for "Watch" upon breaching the short-term investment monitoring guidelines for passive fixed income; the fund has a tracking error of greater than 0.4% for six consecutive rolling 12-month periods (the rolling 12-month periods from October 2015 – March 2016). These funds are discussed in more detail below.

TIAA-CREF Bond Index Fund

As of the period ending March, 31, 2016, the Fund qualifies for "Watch" status for performance concerns upon breaching the short-term investment monitoring guidelines.

Investment Role in Program

The fund is a passively managed strategy that seeks a favorable long-term total return, mainly from current income. The fund invests at least 80% of its assets in bonds within its benchmark and portfolio tracking index, the Barclays U.S. Aggregate Bond Index.

History and Organizational Structure

Founded in 1918, TIAA is a global asset manager providing investment solutions and strategies to a wide range of clients worldwide. TIAA is one of the largest global asset managers across multiple asset classes and has built management expertise in every asset class: fixed income, real estate, equities, international, and alternatives.

Investment Team

The portfolio is co-managed by TIAA Directors Lijun (Kevin) Chen and James Tsang, CFA. Mr. Chen has been a manager on the fund since the beginning of 2010, and Mr. Tsang has been on the fund since August 2011, replacing the fund's prior managers, Elizabeth Black and Steven Sterman.

Investment Philosophy and Approach

Under normal circumstances, the Fund invests at least 80% of its assets in bonds within its benchmark and portfolio tracking index, the Barclays U.S. Aggregate Bond Index. The Fund uses a sampling technique to create a portfolio that closely matches the overall investment characteristics of the Index (for example, duration, sector diversification and credit quality) without investing in all of the securities in its index. At times the Fund may purchase securities not held in the Index but which Teachers Advisors, Inc. (TAI) believes have similar investment characteristics to securities held in its index. Generally, the Fund intends to invest in a wide spectrum of public, investment grade, taxable debt securities denominated in U.S. dollars, including government securities as well as mortgage-backed, commercial mortgage-backed

and asset-backed securities. The Fund's investments in mortgage-backed securities may include pass-through securities sold by private, governmental and government-related organizations and collateralized mortgage obligations, to the extent that such instruments are held by the Index. The Fund generally will invest in foreign securities denominated in U.S. dollars only to the extent they are included or eligible to be included in the Index.

The securities purchased by the Fund will mainly be high-quality instruments rated in the top four credit categories by Moody's or S&P or deemed to be of the same quality by TAI using its own credit quality analysis. The Fund may continue to hold instruments that were rated as high-quality when purchased but which subsequently are downgraded to below-investment-grade status or have their ratings withdrawn by one or more rating agencies.

Performance

The TIAA-CREF Bond Index Fund generated a tracking error of 0.43% as of the latest 1-year period, placing slightly above the acceptable limit of 0.40% as per the Program's *Monitoring Procedures and Criteria*. The Fund's rolling 12-month tracking error has exceeded the threshold since August 2015, while medium-term tracking error has remained within acceptable limits.

When looking at monthly excess results since being added to the Program, the fund experienced increased excess return volatility in 2015 compared to prior years. Monthly excess out/underperformance for the fund versus its benchmark topped 20+ basis points during three months out of the most recent calendar year. The TIAA-CREF Bond Index fund was inceptioned in September 2009, and historical rolling 12-month tracking error (September 2010 – December 2014) has ranged from 0.14-0.21%. However, in 2015, rolling 12-month tracking error increased to a high of 0.49% in September due to the excess return volatility experienced earlier in the year. The excess return volatility was largely a result of market volatility and pricing discrepancies between the pricing service used by the fund (IDC) and prices used by the Barclays benchmark. Barclays uses a 3pm closing price each day, while the fund uses a 4pm closing. During periods of high volatility, these pricing differences can be significant and affect the short-term tracking error of the fund.

Monthly Excess Performance

Recommendation

At this time, **PCA recommends that the TIAA-CREF Bond Index Fund be placed on "Watch" status.**

Funds Currently on "Watch" Status

The PIMCO Income Fund and the PIMCO Real Return Fund were placed on "Watch" status for organizational concerns upon the departure of the firm's CIO and founder, Bill Gross, in September 2014. Since the departure of Mr. Gross, the firm has experienced various other portfolio manager departures and high-level organizational restructurings (e.g., investment committee changes). The latest development at the firm, reported in October 2015, is a lawsuit filed by Mr. Gross against the firm. The lawsuit states a complaint for 1) constructive termination, 2) breach of contract, and 3) breach of covenant of good faith and fair dealing. With regard to the allegations within the lawsuit, the accusation of unethical fee practices within the PIMCO mutual fund business raises concern. Due to the various allegations within the lawsuit, along with the ongoing organizational changes and uncertainty with respect to PIMCO, PCA recommends the Plan's PIMCO funds remain on "Watch" status. These funds are discussed in more detail below.

PIMCO Real Return Fund

The Fund was placed on "Watch" status for organizational concerns upon the departure of the firm's CIO and founder, Bill Gross, in September 2014. As of the period ending March 31, 2016, the Fund qualifies for "Watch" status for performance concerns upon breaching the short-term investment monitoring guidelines.

Investment Role in Program

The fund is an actively managed strategy that provides investors exposure to US Treasury Inflation Protected Securities (TIPS). The fund seeks to provide high correlation to the broad TIPS market and consistently outperforms the benchmark by leveraging PIMCO's disciplined investment process, global investment team, and focus on risk management. The strategy can invest in up to 20% of assets outside of the US TIPS market.

History and Organizational Structure

PIMCO (Pacific Investment Management Company) was founded in 1971 and started as a subsidiary of Pacific Life Insurance Company to manage separate accounts for institutional clients. In 2000, PIMCO was acquired by AllianzSE, a large global financial services company based in Germany. PIMCO currently operates as a separate and autonomous subsidiary of Allianz. PIMCO is currently one of the world's largest fixed income managers with offices around the globe.

Investment Team

Mihir Worah, Managing Director and CIO of Real Return and Asset Allocation, has been the lead portfolio manager of the fund since December 2007. Mr. Worah is a member of PIMCO's Investment Committee and Executive Committee and oversees portfolio management of the US. He serves as a generalist portfolio manager who manages a variety of fixed income, commodity and multi-asset portfolios. Mr. Worah is also responsible for overseeing the firm's US-based investment personnel. In January 2015, PIMCO announced Jeramie Banet was added as a co-Portfolio Manager to the Real Return fund. Mr. Banet first joined PIMCO in 2011 and re-joined the firm in 2014.

The Real Return portfolio management team is responsible for adapting the firm's "top-down" views into TIPS portfolios and further incorporates TIPS-specific "bottom-up" views to create a well-diversified portfolio.

The management team is supported by additional commodities specialists and has access to a number of other sector teams across the firm.

Investment Philosophy and Approach

PIMCO's Real Return investment philosophy is centered on the goal of delivering the strategic characteristics of the TIPS asset class in a way that enhances total real returns. The TIPS market provides a robust opportunity set to add active alpha, and PIMCO's long-term track record is reflective of this. To accomplish the dual goals of providing exposure to the TIPS asset class and delivering active excess returns, the firm's Real Return investment philosophy is based on the following four key points:

- 1) Look to obtain the most cost efficient exposure to the TIPS market. PIMCO seeks better execution than rules-based, price indifferent passive investors. The firm also seeks to intelligently manage portfolio exposures around recurring structural factors that affect the TIPS market, such as index rebalancing and auctions.
- 2) Benefit from a diversified set of "top-down" and "bottom-up" strategies. PIMCO seeks to position TIPS portfolios to benefit from changing "top-down" macroeconomic conditions, such as global rates of growth and inflation, and from a range of "bottom-up" strategies, which relate to inflation and issue specific opportunities unique to the TIPS market.
- 3) Quantify and actively monitor all active positions. The excess return potential of each active position is weighed against its potential risk and scaled accordingly, so as to preserve the strategic characteristics of the TIPS asset class while enhancing investors' real return potential.
- 4) Provide index-like characteristics with above-index returns. Portfolio returns should exhibit high correlation to the TIPS index with a higher level of return.

PIMCO's investment process is oriented to identify and implement global macro "top-down" opportunities and complement that with TIPS specific "bottom-up" strategies to create a well-diversified portfolio around a core strategic position in dedicated TIPS exposure. The firm's "top-down" views are driven by quarterly economic forums. Annually, all PIMCO investment professionals gather for a secular forum in which they identify forces that are likely to affect US and world economies and financial markets over a three to five year horizon. During the other three quarterly intervals, PIMCO investment professionals convene for cyclical forums in which they identify shorter-term economic forces that are likely to prevail over a three to twelve month horizon. The conclusions of these forums are further refined by the Portfolio Management group during an all-day "strategy meeting" in which each specialty desk contributes more detailed sector views. PIMCO's Investment Committee ultimately distills these views into a "model portfolio" that provides a risk position framework that can be adapted by each specialty portfolio manager. This model portfolio provides guidance with respect to duration, curve, country, sector, volatility and currency positioning.

PIMCO does not have any systematic selling procedures. Securities are sold subject to portfolio manager discretion while keeping portfolios directionally consistent with the Investment Committee's "model portfolio" themes. Current holdings are constantly re-evaluated for their

relative attractiveness versus investments available in the marketplace. The expected length of an active “top down” position is generally consistent with the three to twelve month time horizon of the firm’s cyclical views. “Bottom up” strategies, which are more micro in nature, may have a shorter expected payoff horizon.

Performance

Since being placed on “Watch” status 18 months ago, the PIMCO Real Return fund has trailed its benchmark, the Barclays US Treasury US TIPS Index, by (1.59%) and ranked in the 56th percentile versus its peers in the Inflation-Protected Bond category. Over the latest quarter the portfolio underperformed the benchmark by (0.34%). The strategy’s underweight duration positioning, notably its short exposure to U.K. nominal rates, and currency positioning dragged down relative gains experienced from emerging markets exposure and short long-dated U.K. breakeven inflation. The fund’s continued underperformance has resulted in rolling 12-month performance to place below the (1.0%) probationary band for six consecutive months and qualifies the fund for “Watch” status for performance concerns per the Program’s *Monitoring Procedures and Criteria*. Over the latest 1-year period, the portfolio trailed the benchmark by (1.81%), which ranked in the 68th percentile versus peers.

When looking at quarterly excess results since being added to the Program, the fund has struggled versus its benchmark since the second half of the 2014.

Relative underperformance in 2015 mostly occurred in the second and third quarters. Exposure to inflation-linked bonds in Italy in the second quarter and commodity-driven weakness in stakes on US inflation in the third quarter were a drag on relative results. At times, PIMCO’s strategy has led to significant off-index positions, resulting in large deviations from basic index allocations.

The portfolio underperformed the benchmark by (0.94%) over the 3-year period and (0.37%) over the 5-year period; these results ranked in the 61st and 11th percentile versus their peers, respectively.

Recommendation

At this time, due to both organizational and performance concerns, **PCA recommends that the PIMCO Real Return Fund remain on “Watch” status.**

PIMCO Income Fund

The Fund was placed on "Watch" status for organizational concerns upon the departure of the firm's CIO and founder, Bill Gross, in September 2014.

Investment Role in Program

The fund is a portfolio of a broad range of intermediate-duration bonds that is actively managed to maximize current income while maintaining a relatively low risk profile. It also has a secondary goal of capital appreciation. The strategy utilizes multiple sectors of the bond market in an effort to generate a competitive and consistent distribution yield and monthly dividend. Managed to pursue efficient income generation, the strategy also focuses on PIMCO total-return ideas in an effort to maximize capital appreciation and risk-adjusted returns relative to its peers. This approach seeks to provide consistent income over the long term.

History and Organizational Structure

PIMCO (Pacific Investment Management Company) was founded in 1971 and started as a subsidiary of Pacific Life Insurance Company to manage separate accounts for institutional clients. In 2000, PIMCO was acquired by AllianzSE, a large global financial services company based in Germany. PIMCO currently operates as a separate and autonomous subsidiary of Allianz. PIMCO is currently one of the world's largest fixed income managers with offices around the globe.

Investment Team

Daniel Ivascyn has been the lead portfolio manager of the fund since its inception in 2007. Mr. Ivascyn was named Group Chief Investment Officer in October 2014 upon the departure of the firm's former CIO and founder, Bill Gross. He is also the head of the mortgage credit portfolio management team and a lead portfolio manager for PIMCO's credit hedge fund and mortgage opportunistic strategies. Mr. Ivascyn is a member of PIMCO's Executive Committee and a member of the Investment Committee. Morningstar named him Fixed-Income Fund Manager of the Year (US) for 2013.

Mr. Ivascyn is supported by Alfred Murata who has been co-portfolio manager on the fund since March 2013. Mr. Murata joined PIMCO in 2001. With Mr. Ivascyn, Morningstar named Mr. Murata Fixed-Income Fund Manager of the Year (U.S.) for 2013.

Investment Philosophy and Approach

PIMCO's investment philosophy for the Income strategy revolves around the principle of diversification. By diversifying strategies, or relying on multiple sources of value, they are confident that they will be able to generate a solid track record with a high degree of consistency. They seek to add value through the use of "top-down" strategies such as exposure to interest rates, or duration, changing volatility, yield curve positioning and sector rotation. These strategies are deployed from a macro view of the portfolio that are driven by PIMCO's secular outlook of the forces likely to influence the economy and financial markets over the next three to five years and their cyclical views of two-to-four quarter trends. "Bottom-up" strategies drive PIMCO's security-selection process and help identify and analyze undervalued securities and securities that pay high income. Here, they employ advanced proprietary analytics and expertise in all major fixed-income sectors. By combining perspectives from both the portfolio and security levels, they attempt to add value consistently over time within acceptable levels of portfolio risk.

PIMCO's investment process starts with an annual Secular Forum at which their investment professionals from around the globe gather with industry experts for a discussion about the future of the global economy and financial markets. The goal of this Forum is to look beyond the current business cycle and determine how secular forces will play out over the next three to five years. Quarterly, PIMCO holds Economic Forums to evaluate growth and inflation over the next six to nine months.

Following the Secular and Economic Forums, the Investment Committee, comprised of senior portfolio managers as well as PIMCO's Chief Economist and headed by PIMCO's Group Chief Investment Officer and CIOs, develops key portfolio strategies. They consider both the "top-down" conclusions emanating from the Forum, as well as the "bottom-up" market intelligence provided by teams of sector specialist portfolio managers. Through an interactive series of meetings, the Investment Committee defines a set of consistent strategies that are then implemented across all PIMCO strategies.

Portfolios are then continuously monitored for adherence to the current model portfolio structure, and historical measures such as volatility (close to benchmark) and tracking error (moderate) affirm PIMCO's adherence to a diversified, moderate risk style.

Buy and sell decisions are executed in order to optimize the risk/return and the relative value characteristics of the portfolio. PIMCO does not employ automated or mechanical selling procedures. Securities are sold when the credit analysis indicates that a company or a particular issue will become fundamentally flawed. Current holdings are constantly re-evaluated for their relative attractiveness versus investments available in the marketplace. Securities are sold when they individually no longer represent good value, when superior risk/return potential exists in substitute positions (factoring in transaction costs), or when they no longer fit with the macroeconomic or structural strategies in the portfolio.

Performance

Since being placed on "Watch" status 18 months ago, the PIMCO Income Fund has trailed its benchmark, the Barclays US Aggregate Bond Index, by (0.70%) and ranked in the 6th percentile versus its peers in the Multisector Bond category. Over the recent quarter, the fund underperformed the benchmark by (1.25%). High quality duration exposures, allocations to high yield and investment grade credit, and holdings of emerging market debt contributed to the recent quarter's results, while holdings of non-Agency mortgages and a long US dollar bias versus other currencies negatively weighed on performance. The portfolio outperformed the benchmark by 2.01% over the 3-year period and 4.18% over the 5-year period; these results ranked in the 1st and 2nd percentiles versus their peers, respectively. Performance results are within acceptable limits as per the Program's *Monitoring Procedures and Criteria*.

Recommendation

At this time, due to organizational concerns, **PCA recommends that the PIMCO Income Fund remain on "Watch" status.**

DISCLOSURES: This document is provided for informational purposes only. It does not constitute an offer of securities of any of the issuers that may be described herein.
